Applying Hot Fix 38 for Sage SalesLogix Version 7.5.1

This hot fix addresses the following issues:

Defect	Description
1-71073	FileConfigurationSource holds on to an instance of HttpContext when it is created (once per session) and will hold onto it until the user's session ends.
1-71080	NHibernate: QueryPlanCache is not caching properly.
1-71086	Improve Group XML Caching to use less memory.
1-71097	Memory usage: Add logic to free old PageWorkItem state from the asp.net session.
1-71108	Web: When a group is selected, it is quering the fields in the group layout. It should query the IDs.
1-71152	Export to File memory optimization.

This hot fix requires version 7.5.1 and hot fixes 7.5.1 HF 6 and 7.5.1 HF 24. Do not install this hot fix on any other Sage SalesLogix version. Contact your support representative or go to <http://support.saleslogix.com> to obtain the hot fix.

File Information

File Name	File Contents
SLX_v751_HF38.zip	Sage SalesLogix v7.5.1 HF38 VFS Upgrade.zip
Sage SalesLogix v7.5.1 HF38 VFS Upgrade.zip	commontaskstasklet.ascx.cs, NHibernate.dll, Sage.SalesLogix.Client.GroupBuilder.dll, Sage.Platform.Configuration.dll, Sage.Platform.Application.UI.Web.dll.

Applying the Hot Fix

Ensure you have applied hot fixes 7.5.1 HF 6 and HF 24 prior to this hot fix. Then, install the bundle using the Application Architect, and build and deploy your Web site(s).

Note Before installing the bundle, review the files included in the hot fix. Back up any customized files that may be affected, or back up the whole project if there are many files. Then apply the hot fix bundle in one of the following ways:

- Manually merge the hot fix items with the customized items.
- Apply the bundle (overwriting all existing items), and then manually merge the customized items.

To install the bundle

1. Copy **SLX_v751_HF38.zip** to your local machine and unzip it.

Note There is a folder path character limitation that requires the path where you save or copy bundles that are created in the Application Architect to be 57 characters or less (including the drive name).

2. Ensure you have **Write** permissions to the bundle installation folder.
Check permissions on the Security tab in the folder properties.
3. Open the **Application Architect**.
4. In the **Project Explorer**, right-click the project, and then click **Install Bundle**.
5. Browse to the folder where you unzipped the hot fix files, click **Sage SalesLogix v7.5.1 HF38 VFS Upgrade.zip**, and then click **Open**.
6. On the **Select Bundle** screen, click **Next**.
7. On the **Select Items** screen, ensure the **Portals** option is selected.
8. Click **Next**, and then click **Finish**.

To build and deploy the Web site

1. In the **Project Explorer**, click the project.
2. Press and hold the **CTRL** key, and then on the **Build** menu, click **Build Web Platform**.
All the files in the entire assembly for the current project are compiled. Status for the build is displayed in the Output Window at the bottom of the screen.
3. On the **View** menu, click **Deployment Explorer**.
4. Expand **Deployments**.
5. Double-click the portal to deploy.
6. Under **Deployment Targets**, right-click the target portal, and click **Deploy Portal**.
A status box appears indicating status for the deployment.
7. Repeat these steps for the each of the affected portals.

Note By default, the Sage SalesLogix Web Client portal is set to deploy to the localhost, but you can change these settings to fit your environment.
