Applying Web Hot Fix Package 06 for Sage SalesLogix Version 7.5.3

This hot fix addresses the following issues:

Defect	Description
1-81331	An error occurs during login to the Web Client when users have access to other user's calendars (an F5 refresh resolves the error).
1-81369	Having more than one dependency lookup on a form causes the first dependency lookup to fail.
1-81371	Web Client user password is not case sensitive.
1-81493	Errors building the web platform when auditing is enabled on a Contact property.
1-81553	Reminders are always saved as 15 minutes when using Mobile or follow-up activities using Send SLX.

This hot fix requires version 7.5.3 and all previous Web hot fix packages beginning with 01. Do not install this hot fix on any other Sage SalesLogix version. Contact your support representative or go to <http://support.saleslogix.com> to obtain the hot fix.

File Information

File Name	File Contents	File Version

	Sage.SalesLogix.Client.GroupBuilder.dll	7.5.3.4377
	Sage.SalesLogix.Web.Controls.dll	7.5.3.4377
	Sage.SalesLogix.Web.dll	7.5.3.4377

Applying the Hot Fix

Prior to installing this hot fix ensure you have applied all of the following hot fix packages in the order listed:

- 7.5.3 Web Hot Fix 01
- 7.5.3 Web Hot Fix 02
- 7.5.3 Web Hot Fix 03
- 7.5.3 Web Hot Fix 04
- 7.5.3 Web Hot Fix 05

Apply the hot fix to all computers where the Application Architect is installed. Install the bundle using the Application Architect, and then build and deploy your Web site(s).

To apply

1. Extract the contents of the **SLX_v753_Web_HF06.zip** file to a temporary folder.
2. Navigate to the folder where you extracted the hot fix files and double-click **SLX_v753_Web_HF06.exe**.
3. On the **SalesLogix - v7.5.3 Web Hot Fix 06** screen:
 - a. Select the **Extract and Install the SalesLogix Hot Fix** option. The hot fix files, including the VFS bundle, are extracted to the location you specify. The files are not removed once the installation is complete.
Note Selecting the other option prevents the VFS bundle from being available after the patch is installed, since the files are then deleted.
 - b. Click **Browse** to select the location where you want to store the hot fix files.
Note There is a folder path character limitation that requires the path where you save or copy bundles that are created in the Application Architect to be 57 characters or less (including the drive name).
 - c. Click **Next**.
4. On the **Welcome** screen, click **Install**.
5. On the **Completed** screen, click **Finish**.

Installing the Bundle

Use the Application Architect to install the hot fix bundle.

To install

1. Ensure you have **Write** permissions to the bundle installation folder.
Check permissions on the Security tab on the folder properties.
2. Open the **Application Architect**.
3. In the **Project Explorer**, right-click the project, and then click **Install Bundle**.
4. Navigate to the folder where you extracted the hot fix files, click **Sage SalesLogix v7.5.3 Web HF06 VFS Upgrade.zip**, and then click **Open**.
5. On the **Select Bundle** screen, click **Next**.
6. On the **Select Items** screen, ensure the **Portals** option is selected.
7. Click **Next**, and then click **Finish**.

Building and Deploying the Web Changes

To make your changes available, you must build and deploy the Web portal.

To build and deploy

1. In the **Project Explorer**, click the project.
2. Press and hold the **CTRL** key, and then on the **Build** menu, click **Build Web Platform**.
All the files in the entire assembly for the current project are compiled. Status for the build is displayed in the Output Window at the bottom of the screen.
3. When the build is complete, click **Deployment Explorer** on the **View** menu.
4. Expand **Deployments**.
5. Double-click the portal to deploy.
6. Under **Deployment Targets**, right-click the target portal, and click **Deploy Portal**.
A status box appears indicating status for the deployment.
7. Repeat these steps for each of the affected portals.

Note By default, the Sage SalesLogix Web Client portal is set to deploy to the localhost, but you can change these settings to fit your environment.
