Applying Update 02 for Sage SalesLogix Version 7.5.4

This document describes update 02 for Sage SalesLogix version 7.5.4. This update requires version 7.5.4. Do not install this update on any other Sage SalesLogix version. To obtain the update, contact your support representative or go to <http://support.saleslogix.com> to obtain the update.

This update addresses the following issues:

Defect	Description
1-81974	Longnotes are truncated after synchronization when Multibyte characters (~ 255 characters) are used.
11083287	HIPPA support for PHI Data.

File Information

File Name	File Contents	File Version

Applying the Update

Apply the update to all computers where the Sage SalesLogix Client, Administrator, Architect, Sync Server, Remote Office, Disconnected Web (Offline) Client, or Remote Client is installed. Then install the bundle using the Administrator. For details on finding the changes to the script, see the section ["Finding Script Changes" on page 3](#).

Before installing the update bundle, create a bundle of all customized plugins in your database. Sage SalesLogix does not overwrite your customized plugins. However, this bundle can be used as a backup of your customizations.

To apply

1. Close all Sage SalesLogix applications on the computer to which you are applying the update.
2. Extract the contents of the **SLX_v754_Update02.zip** file to a temporary folder.
3. Navigate to the folder where you extracted the update files and double-click **SLX_v754_Update02.exe**.
4. On the **SalesLogix - v7.5.4 Update 02** screen, select your installation method:
 - **Install the SalesLogix Update** extracts the update files to a temporary folder and removes the files once the installation is complete.
 - **Extract and Install the SalesLogix Update** extracts the update files to a location you specify. The files are not removed once the installation is complete. If you choose this option, select a location where you want to store the update files.
5. Click **Next**.
6. On the **Welcome** screen, click **Install**, to install the patch.

Note The Update Network Images button is available on the Welcome screen. If you created automated installations of the Sage SalesLogix Client, you can upgrade the installations to update 02 using this option (you must browse to the .msi file and click Update).

Automated installations can be used to install the Sage SalesLogix Client for new users. When the automated installation is updated using this method, it contains the initial version of the Sage SalesLogix Client and all service packs and updates applied to your system.

7. On the **Completed** screen, click **Finish**.

To install the bundle

1. Open the **Administrator**.
2. On the **Navigation Bar**, click **Bundles**.
3. Click **Install**.
4. Navigate to the folder where you extracted the update files and double-click the bundle named **SalesLogix v7.5.4 Update 02.sxb**.
5. After the bundle is loaded, the **Choose Actions to Install** dialog box appears. View the plugins to be installed with this release, and then click **OK**.

Finding Script Changes

Changes to Sage SalesLogix scripts, and scripts on forms, can be researched using a third-party comparison utility such as Beyond Compare or Microsoft Word. You can use the following example procedure to determine the Sage SalesLogix script changes in this release. Then, use that information to update your custom scripts with the Sage SalesLogix changes, or add your customizations to the Sage SalesLogix script.

To find script changes

1. Apply the upgrade bundle to a test environment.
2. Open the original version of the script or form you want to research in the **Architect**.
3. Right-click the script, and then click **Select All**.
4. Copy and paste the information to a text editor, such as **WordPad**.
5. Save the script with the version number in the name.
6. Repeat steps 2 - 5 for the same plugin updated in this release.
7. Open the original plugin version in **Microsoft Word** (saved in step 5).
8. On the **Tools** menu, click **Compare and Merge Documents**.
9. Browse to and select the updated plugin (saved in step 6) and click **Merge**.
10. View the code changes and determine how to merge the Sage SalesLogix changes with your customizations.
