Disclaimer

We have thoroughly reviewed this manual. All statements, technical information, and recommendations in this manual and in any guides or related documents are believed reliable, but the accuracy and completeness thereof are not guaranteed or warranted, and they are not intended to be, nor should they be understood to be, representations or warranties concerning the products described. Saleslogix assumes no responsibility or liability for errors or inaccuracies with respect to this publication or usage of information. Further, we reserve the right to make changes to the information described in this manual at any time without notice and without obligation to notify any person of such changes.

Technical Support

Technical Support is available to customers with support contracts and to Certified Business Partners. Calls are answered during business hours, Monday through Friday, excluding holidays.

Partners with a valid technical support contract and a Web access code can request technical support electronically on the Partner Support Portal Web site: www.saleslogix.com/partners.

Customers with a valid technical support contract and a Web access code can request technical support electronically on the Customer Support Portal Web site: www.saleslogix.com/customers.

Revisions to this book are available through both Portal Web sites. Check regularly for product documentation updates.

Applying Web Core Update 03b for Saleslogix Version 8.1

This document describes Web Core Update 03b for Saleslogix version 8.1.

Web Core Update 03b includes Web Core Update 02 which included:

- Oracle support for the Saleslogix Web Client
- Outlook sync support for the Saleslogix Web and Windows Clients

What's New in Web Core Update 03b

Web Core Update 03b replaces Web Core Update 03. Web Core Update 03b includes all previous Web Core updates, plus several updated files to address fixes that were not included in Web Core Update 03.

Do one of the following:

- If you are updating a version of 8.1 prior to Web Core Update 03b, then follow the instructions in this document to apply Web Core Update 03b.
- If you previously installed Web Core Update 03 and wish to implement the additional fixes in Web Core Update 03b, you do not need to install the Saleslogix v8.1.0 Web Core Update 03.sxb again. You only need to apply the install patch and apply the updated SLX v8.1.0 VFS Web Core Update 03b.zip.

Web Core Update 03b includes updated versions of:

- _ParameterEditorBase.js
- ActivityEditorAttendeesTab.js
- CrystalReportWizardController.js
- Currency.js
- Enumerations.js
- GroupLookup.js
- Helper.js
- JobDefinitionsListPanelConfig.js
- main.js
- MultiSelectPickList.js
- ReportManagerUtility.js
- Sage.js
- Sage.js.uncompressed.js
- Sage.Platform.BundleModel.AdminModule.dll
- Sage.Platform.WebPortal.Design.dll
- Sage-Combined.js

- SingleSelectPickList.js
- TransferBoxWidget.js

There are other files with updated versions in Web Core Update 03b, but they do not contain any changes.

These updated files address the following defects:

- 14096847
- 14096771
- 14096764

See "[Issues Fixed in This Update](#)" on page 3 for detailed information.

Prerequisites

The following Saleslogix software must be installed before installing this update:

- Saleslogix version 8.1
- Saleslogix 8.1 SNC Update 03b.
- A supported version of Microsoft .NET Framework must be installed on the Web Host server in order to support Internet Explorer 10.
 - Microsoft .NET Framework v4.5.1 (recommended) - This version of .NET Framework will run concurrently with versions 3.5 and earlier, but will replace .NET Framework versions 4.0 and 4.5. Microsoft .NET Framework 4.5.1 can be downloaded from the Microsoft site:<http://www.microsoft.com/en-us/download/details.aspx?id=41641>

This link was valid at the time this document was distributed. If this link is no longer valid, search the <http://www.microsoft.com> site for ".NET Framework 4.5.1" for the correct location.

- Microsoft .NET Framework v3.5.1 - If your environment does not support Microsoft .NET Framework v4.5.1, then you must apply two Microsoft hot fixes to support Internet Explorer 10. These hot fixes can be downloaded from:
<http://support.microsoft.com/kb/2600100>
<http://support.microsoft.com/kb/2608565>

These links were valid at the time this document was distributed. If these links are no longer valid, search the <http://www.microsoft.com> site for "KB2600100" and "KB2608565"

Do not install Web Core Update 03b for Saleslogix 8.1 on any other Saleslogix version.

Issues Fixed in This Update

Web Core Update 03b for Saleslogix version 8.1 addresses the following issues:

All defect descriptions apply to the Saleslogix Web Client unless the defect description specifically states otherwise.

Defect	Description
14096847	No records found" message when performing a lookup from the Saleslogix Dashboard. This is also true when performing a lookup from Activities and Reports.
14096771	Unable to bundle support files after applying 8.1 Web Core Update 03.
14096764	Unable to edit Adjusted Price in the Opportunity Products tab grid after applying 8.1 SNC Update 03 and Core Update 03.

Previously Fixed Issues

Web Core Updates are cumulative, so Web Core Update 03b for Saleslogix 8.1 contains fixes released in previous updates.

Web Core Update 03 for Saleslogix version 8.1 addresses the following issues:

All defect descriptions apply to the Saleslogix Web Client unless the defect description specifically states otherwise.

Defect	Description
12090528	Creating a campaign target list using a custom Contact or Lead group causes the error "Sys.WebForms.PageRequestManagerServerErrorException: We're sorry, you've encountered an error. If applicable, please try again."
13091921	In a localized environment, Cyrillic characters do not display correctly in the Query Builder View SQL view.
13092141	When exporting an account the resource code displays.
13092478	In the Query Builder, the 'Use value as literal' option changes the 'Value is' box to a date field.
13092507	An account that is linked to more than 1 endpoint causes issues when creating new contacts.
13096111	When a group includes an Activity field in the layout that is linked to the entity and that link is clicked the error "The file '/SlixClient/ACTIVITY.aspx' does not exist." displays.
13092722	When editing an activity using steps in a specific order, the activity window may stop responding.
13093127	The items in a multi-select picklist with more than 12 items are misaligned.
13093797	Dashboard tabs with special characters in the tab name cannot be displayed after sharing.
13094064	In a localized environment the Reports view, Report Manager Tasks pane has untranslated strings.

Defect	Description
13094174	Creating a new unscheduled activity where the Leader is not the logged in user sets the Leader to the currently logged in user when saved.
13094343	Add support for reports with dynamic parameters.
13094434	In a localized environment, when adding an attachment, the complete dialog box has untranslated strings.
13094508	In a localized environment, the Reports Schedule and History tabs contain untranslated strings.
14094693	The Currency Code filter should be removed from the Currency Lookup.
14094751	In the Application Architect, opening the New page Wizard and using the default values causes an error.
14094759	In a German localized environment, some elements do not translate if a language locale was specified.
14094803	Running a report with a parameter that returns a large number of values causes an "Internal Server Error (500)..." error.
14094804	In a localized environment, the Support Ticket Knowledge Base Summary - Sample report contains an untranslated string.
13094920	The Saleslogix Web Client hangs when accessing entities using Internet Explorer 8 and XP.
14094932	When sending an e-mail to more than one contact using SendSLX, the attachment is only displayed as a hyperlink for one of the contacts.
14095110	The Lookup Account Manager dialog box is missing the OK button.
14095112	The Query Builder Assign Condition calls the date control when select "Use Value as a literal".
14095171	Extend the Detail view Group List to show more information.
14095178	Exporting group to Excel with reserved characters in the group's display name displays the error "An error occurred requesting job manager: Illegal characters in path."
14095205	In Report Manager, the DateTimeParameter prompt kind is not working.
14095217	The Saleslogix Web numeric control defaults to zero causing unsaved data messages.
14095243	Including the Return Number in a Ticket Group Layout causes the error "We're sorry, your request could not be completed".
14095274	Updating Opportunities from the Opportunities list view displays the error "Unexpected error occurred during the execution of a job 'Sage.SalesLogix.BusinessRules.Jobs.UpdateEntity.job'".
14095335	In a Portuguese environment, the Tools menu, Options screen fails to load in a Firefox browser.
14095396	After moving a column on the Saleslogix Web client Reports list view, leaving, and then returning to Reports the grid does not display.
14095416	Calls that use "typeof ActiveXObject" to determine if ActiveX client support is available are incompatible with IE 11.
14095455	Numeric control cannot display percentiles as numeric values with three decimal places.

Defect	Description
14095474	Group tabs queries should only request necessary properties instead of an entire group's meta data.
14095482	In a localized environment the Reports list view, Schedules tab, Job Name column label is not translated.
14095493	When serializing SDataPayload the property name should be used instead of the Relationship type ResourceName property.
14095509	When sharing a group in the Web Client the Assign Owner control does not list any users, teams, or departments.
14095541	Redundant query arguments in some linked URLs Causes increased payload sizes.
14095544	Updating multiple leads when a filter is applied displays the error "This job cannot run when filters are applied. Please clear all filters and try again."
14095551	Selecting a filter in Products list view causes the error "We're sorry, you've encountered an error. If applicable, please try again. HTTP status: Internal Server Error (500)."
14095555	A custom filter consisting of User Lookup type and operator of Contains filters the data but causes a "Can not convert object to String" error.
14095563	Users cannot share or delete their own groups.
14095574	Numeric control cannot display percentiles as numeric values with 3 decimal places. if the strict property is false.
14095580	On the Activities list view Past Due and Alarms tabs the summary view does not load.
14095581	If more than 100 users have calendar access to a user, none of those users are able to edit history records of that user.
14095599	During a Google synchronization some changes are synchronized back and forth several times.
14095605	If the LookupControl BindingMode is set to "String", then the retrieved "entity" object is not actually used, which means the system is making an unnecessary query.
14095606	The Role filter on the Users List view does not filter the list.
14095617	The Object of type" Eventlog error 'System.EventArgs' cannot be converted to type 'Sage.Platform.Application.ItemEventArgs'.
14095639	When opening a custom filter in a list view the following error displays, Error 500 - "Could not load type 'Sage.Entity.Interfaces ICollection`1' from assembly 'Sage.Entity.Interfaces'. HTTP status: Internal Server Error".
14095646	If an occurrence of a recurring activity is completed, synchronized to Outlook, and then the activity is deleted in Saleslogix, the activity is not deleted in Outlook during the next or any future synchronizations.
14095653	The Saleslogix.Reporting.API.dll should not log assembly binding errors for resources (*.resources).
14095688	The Application Architect should allow dragging and dropping nVelocity templates to a bundle.
14095689	The SData activities endpoint sort order is incorrect.
14095691	The SData \$Schema call on the gcrm adapter returns an invalid schema import that includes concatenation of dynamic and common schemas.

Defect	Description
14095693	The ActivityBeforeChange trigger in Oracle is not using the variable and always defaults to Activity type.
14095735	Users can modify a name field set to read only via double-click action.
14095751	Removing or deleting a contact from the contact sync group in Saleslogix does not remove the contact in Google.
14095752	Deleting an activity in Saleslogix does not delete the event in Google.
14095753	A group's FirstRow value should not be allowed to be less than 1.
14095754	If a member of an activity declines (deletes) the activity after it has synchronized to Google the activity is not removed from Google.
14095757	The Report Export Options Excel- Data only option is missing.
14095766	Performing a mail merge to a contact brought into Saleslogix from Outlook causes the error "The Mail Merge Engine encountered an error and cannot continue. The address table query is empty."
14095767	Using the down arrow to navigate pick lists with a large number of values causes the Web page to move up.
14095777	Export to Excel fails when a group name contains invalid characters.
14095780	SData feed for the activities endpoint is not working correctly for the Saleslogix Mobile and Web clients.
14095810	On an Oracle database, an error is returned when a contact updated in Outlook attempts to synchronize back to Saleslogix.
14095838	In a Windows 7 environment with Internet Explorer 11 and English UK as the default language, the Activities List view displays correctly, but a "404 File or directory not found" displays in a web debugging tool.
14095855	In a Windows 7 environment with Internet Explorer 11 and Es-Es as the default language, the user can log on, but a "404 File or directory not found" displays in a web debugging tool.
14095898	Running an Export to Excel job causes the error "QuartzScheduler_Worker-5] ERROR Quartz.Core.JobRunShell - Job Six.JobService.Sage.SalesLogix.BusinessRules.Jobs.ExportToExcelJob threw an unhandled Exception: Sage.SalesLogix.Client.GroupBuilder.GroupInfoException: There was an error executing a group's SQL. ---> System.OutOfMemoryException".
14095911	A null reference exception message appears when hosting multiple tenants out of a single database and one of the tenants is deleted.
14095913	Implement Date/Time parameter support for reports.
14095923	When moving a contact, activities and history items are not handle as the selected options indicate.
14095924	When loading reports, some reports cause the error "An InvalidCastException" to display.
14095925	If a group has two columns with the same propertyname filters do not work correctly.
14095963	In a localized environment the Schedule Activity dialog box has two items that do not translate correctly.
14095966	On an Oracle database, the Schedule or Edit an Activity Availability tab causes a 500 error.
14096002	In a German environment there are incorrect translations on the Activities view.

Defect	Description
14096004	The SpeedSearch.js file needs localized resource files.
14096018	Using an apostrophe in the Edit Calendar Users lookup causes the error "We're sorry, you've encountered an error....HTTP status: Internal Server Error (500)."
14096021	In the Edit Calendar Users lookup window, names that contain an apostrophe display with a "\".
14096025	On an Oracle database,unable to delete a a lead from the Lead Detail view fails.
14096029	In a Firefox browser, on the Calendar, using the right-click menu to edit an occurrence of recurring activity that does not have a subject causes the date/time, contact, account to be blank.
14096031	Adding users to each other's teams causes a "Server Request Timed Out" error.
14096090	In a localized environment, when sending a ticket e-mail any extended characters are corrupted in the e-mail message.
14096099	In a German environment the Reports view contains incorrect translations.
14096121	When the Time Zone is set to an option using Daylight Savings timeless activities appear on the Calendar a day late +24 hours.
14096169	Undesirable activity behavior due to Sync trigger changes.
14096170	In a localized environment accessing entities causes the error "The model type: 'Sage.Platform.Orm.Entities.OrmModel' was not found."
14096194	In a localized environment, on the Timeline tabs, "Meeting" is not translated.
14096205	If the trigger description is null it causes an exception in the CrystalReportsJob.
14096215	Running a report with a large number of parameter values causes a Request Size Exception error.
14096232	For localized environments implement new localization .js files.
14096236	Building summary views against entities that have dynamic string properties in Unicode models will throw an exception.
14096323	For localized environments implement new localization resources for OptionsDialog.js.
14096354	Calling CompleteActivity for an invalid activity through the SData Dynamic \$service call will throw a NullReferenceException.
14096522	Group layouts should include unique aliases for columns formatted as User, Owner, and PickList Item without requiring the consumer to match the alias naming logic.

Web Core Update 02 for Saleslogix version 8.1 addresses the following issues:

All defect descriptions apply to the Saleslogix Web Client unless the defect description specifically states otherwise. However, some Outlook sync defects may also apply to the Windows Client.

Defect	Description
13092133	In a Russian localized environment, applying 8.0 Web Core update 02 or later breaks the Bundle Creator in the Application Architect.
13092385	When creating an Opportunity group with Sales Potential as a condition, the Browse Field screen has no values.

Defect	Description
13092391	In the Application Architect, setting the active tab and captions on a multi-tab control does not work. It should work as explained in the Application Architect help topic "Setting the Active Tab and Captions on a MultiTab Control".
13092420	A recurring monthly activity shows on the wrong date or time on the calendar.
13092470	User receives the error "Could not load activity" when trying to open, complete, or delete an instance of a recurring activity that is two years in the past or future.
13092559	Removing a Contact last name from the Name text box and then saving populates the last name with the contact's first name.
13092771	The Date/Time picker control in the Integrations dialog will close when choosing the Current Time Zone dropdown.
13092920	When editing a group with date condition of "within last xxx days", the error "Invalid group XML document, the SLXGroup/maintable element is missing" displays.
13093088	Using the Tab key to navigate through controls on a web form does not follow the TabIndex property.
13093571	Changes to a lead do not appear as database changes.
13093633	The generated SQL for a group created using the "does contain data" or "does not contain data" condition does not include empty strings.
13094007	Application Architect crashes when adding a Code Snippet.
13094270	When associating a contact with a user nothing happens after selecting the user and clicking OK in the lookup.
13094330	Groups created with parameters in the Web will fail if the parameters are modified in the Windows client.
13094331	Groups created with parameters in the Windows client will fail if the parameters are modified in the Web client.
13094358	When a recurring activity is created, and then an occurrence is immediately completed using the right-click menu option, an exception activity is not created so nothing is recorded to the GLOBALSYNCTRACKING table.
13094444	In a localized environment, adding an existing file to the library does not display a warning on IE 10 or IE 11 and displays an error on Firefox.
13094505	In a localized environment, the Job Manager has untranslated strings.
14094550	In a localized environment, untranslated string appears in the Support Problem Analysis - Sample report.
14094551	If a Report uses a group condition with a UserID as a parameter, the UserID is replaced with an empty string.
14094553	No records are returned when you generate the Opportunity By Account report for either the Closed-Lost or Closed-Win groups.
14094695	The InstallBundle.exe does not properly install bundles that install correctly in the Application Architect.
14094790	In a localized environment, untranslated characters appear in the warning dialog that displays when an uploaded file exceeds the size limit.
14094868	Groups with custom layouts do not always redirect to Lookup Results tab when performing a lookup.
14094886	A user with access to another user's calendar will see that user's completed activities after Outlook sync runs.

Defect	Description
14094947	Events display one day earlier than scheduled on the Calendar and in the Activity List View when the default start and end dates are modified and the timezone is UTC + #.
14094948	Multi-day events display one day earlier than scheduled on the Calendar and in the Activity List View when the default start and end dates are modified and the timezone is UTC + #.
14094966	Account groups display the error "Unable to cast object of type 'System.DBNull' to type 'System.String'."
14094969	Groups that include an IN clause of string values that contain Unicode fail.
14094977	Group query performance is negatively affected when a user has large number of hidden groups.
14094999	Default security profile drop-down is blank on the Teams and Departments detail views.
14095062	Enable Oracle support.
14095065	On an Oracle database an error occurs when you schedule or edit an activity and click the Availability tab.
14095096	On an Oracle database, exporting a group with a sort order to Excel causes the error "object not set to an instance of an object" to display.
14095102	The Notes/History detail view tab default sort order should be descending.
14095107	When there is an error in a Job Service hosting multiple tenants, the error does not specify in which tenant the error occurred.
14095131	On an Oracle database when scheduling or editing an activity and on the Participants tab, the Role picklist is empty.
14095134	Creating an event with the same Start Date and End Date causes an SData error.
14095144	The SData activity endpoint needs to redefine "recurring" to include expanded occurrences.
14095176	Users can see everyone's sync history in the Sync History views.
14095188	The Saleslogix ContractAdapter saves only the first address of contact on insert.
14095204	On an Oracle database, the SLXNativeQueryHelper class does not execute its DISTINCT COUNT query using the correct syntax.
14095229	On an Oracle database, groups that require multiple joins to a table for which unique alias names are not created, the "WITH FIRSTROW" row query fails with the error "ORA-00918: column ambiguously defined".
14095276	The SLFormat.FixGroupLayoutItemForWebClient() method should not fail if the entity type cannot be resolved.
14095280	On an Oracle database, the XMLSCHEMA is always rebuilt whether or not the REBUILD_SCHEMA flag is set.
14095299	Improve Web Client List view performance.
14095306	Job Notifications throw an exception if the job service is down, but does not indicate that a problem occurred.
14095309	The XMLSCHEMA does not recognize some field types.
14095312	In Job Service multi-tenant scenarios, triggers from one tenant are deleted when another tenant is reloaded.

Applying Web Core Update 03b for Saleslogix Version 8.1

This update addresses the following Accounting Integration issues:

Defect	Description
14094621	Need to support both internal and external URLs for X3.
14095069	The Account and Contact triggers are creating duplicate ERPEmailAddress and ERPPhoneNumber values.

Web Core Update 01 for Saleslogix version 8.1 addresses the following issues:

All defect descriptions apply to the Saleslogix Web Client unless the defect description specifically states otherwise.

Defect	Description
12091151	Under certain circumstances, the Contact Detail view causes query processor errors.
13091760	The Query Builder View SQL does not display the SQL statements correctly.
13092874	In a localized environment, if there are leads that include extended characters, there are corrupted strings on the Import Lead Preview view.
13093159	When editing a group in the Query Builder Assign Condition dialog box, the Date/Time value does not display.
13093164	In the Query Builder Assign Condition dialog box, the Date/Time picker is not updated if the date and time were selected using the Browse button.
13093165	In the Query Builder Assign Condition dialog box, the Browse button on the Assign Condition tab should be disabled when the Operator is "within.."
13093166	In the Query Builder Assign Condition dialog box, the Date/Time Picker should be disabled when you select the "does/does not contain data" operator.
13093167	When using a Chrome browser, the Responses and Opportunities panes in Campaign Budget/Results tab do not display correctly.
13093607	In the Literature Request Management list view, the Send Date differs from the Send Date in the detail view.
13093819	The Sales Order Snapshot Grand Total field does not reflect the adjusted price when a discount is applied.
13093904	In a localized environment, in the Activities list view, the Participant Count column is not localized.
13093905	In a localized environment, on the Schedule/Edit and Activity views, the Participants tab and lookups are not localized.
13093907	In a localized environment, on the Contact Detail view, the Sync History tab columns are not localized.
13094025	When editing an activity from the Calendar, if the Timeless option is changed, then the activity appears on both the Calendar and the Timeless Activities list until the page is refreshed.
13094187	On the Sales Order Detail view, the Grand Total does not update after editing a product quantity.
13094264	In a localized environment, several items in the Reports main view are not localized.
13094370	In the Reports view History tab, if you try to sort by the Report column an "internal server error (500)" displays.

Defect	Description
13094375	On the Lookup Results tab, when switching entities, the filters do not update for the new entity.
13094416	In a localized environment, when editing a Contact group on the Query Builder Layout tab, the Work Phone and Acct Manager fields are not aligned correctly.
13094437	In a localized environment, in the Schedule/Edit an Activity Participants tab, the Search button is not localized.
13094439	In a localized environment, in the Schedule/Edit an Activity Participants tab, the titles of the Lookup Contact and Lookup Lead views are not localized.
13094440	In a localized environment there are untranslated strings in the activity Quick Complete dialog box.
14094575	The Literature Request List view Date Req. column is bound to the wrong field.
14094622	When the browser is set to German De-de, an error displays when trying to set up the Saleslogix Feed for integrations.
14094627	Every page request makes several requests for the complete ADHOCGROUP table.
14094655	In a localized environment, the Query Builder condition is localized, but Eval data is not. This results in no records found.
14094673	In a localized environment, when running a territory realignment report there are untranslated characters in the Enter Values dialog box.
14094677	In a French localized environment, in the Application Architect Core Portals deployment Precompiler, the Compile Options button is truncated.
14094680	In a French localized environment, in the Application Architect there are overlapping fields in the Custom Modules Add file view.
14094715	Activity members are not showing up on the History Details All Participants tab.
14094739	Completed instances of a recurring activity that was created more than a day earlier are not synced to Outlook.
14094741	Invalid Schedule message appears when creating a new scheduled job with no end time and hour or minute as the time period options.
14094758	When completing an activity the modify date on the history record is the same date as the modify date that was on the activity.

This update addresses the following Accounting Integration issue:

Defect	Description
14094662	Account and contact email and phone records are not being inserted from X3 during sync cycle.

File Information

This update may include .pdb files which are not listed in the following table. These files are included to provide additional logging information for troubleshooting purposes.

Applying the Update

This Web Core Update affects the following portals:

- Process Host
- SData
- Saleslogix Web Client
- Saleslogix Offline Web Client
- Customer Portal
- SLXJobService

Install this Update to all computers with the following components installed:

- Administrative Tools and Servers
- Application Architect
- Remote Office
- Saleslogix Offline Web Client
- Web Host

Install the Saleslogix v8.1.0 Web Core Update 03.sxb bundles using the Saleslogix Administrator.

Install the SLX v8.1.0 VFS Web Core Update 03b.zip bundle using the Application Architect, and then build and deploy your Web site(s).

Before installing the Saleslogix v8.1.0 Web Core Update 03.sxb bundle, review the files included in the update. Back up any customized files that may be affected, or back up the whole project if there are many files. Then, apply the update bundle in one of the following ways:

- Manually merge the update items with the customized items.
- Apply the bundle (overwriting all existing items), and then manually merge the customized items.

If you already installed the Saleslogix v8.1.0 Web Core Update 03.sxb for Web Core Update 03 you do not need to install the Saleslogix v8.1.0 Web Core Update 03.sxb again.

To begin the install

1. Close all Saleslogix applications on the computer to which you are applying the Update.
2. Extract the contents of the **SLX_v810_Web_Core_Update_03b.zip** file to a temporary folder.
3. Navigate to the folder where you extracted the Update files and double-click **SLX_v810_Web_Core_Update_03b.exe**.
4. On the **Saleslogix v8.1.0 Web Core Update 03** screen do the following:
 - a. Select the **Extract and Install the Saleslogix Update** option. The Update files, including the VFS bundle, are extracted to the location you specify. The files are not removed once the installation is complete. Selecting the other option prevents the VFS bundle from being available after the patch is installed, because the files are then deleted.
 - b. Click **Change** to select the location where you want to store the update files.

There is a folder path character limitation that requires the path where you save or copy bundles that are created in the Application Architect to be 57 characters or less (including the drive name).

5. Click **Next**.
6. On the **Welcome** screen, click **Install** to install the patch.
7. On the **Completed** screen, click **Finish**.

Finding Script Changes

Changes to Saleslogix scripts, and scripts on forms, can be researched using a third-party comparison utility such as Beyond Compare or Microsoft Word. You can use the following example procedure to determine the Saleslogix script changes in this release. Then, use that information to update your custom scripts with the Saleslogix changes, or add your customizations to the Saleslogix script.

To find script changes

1. Apply the upgrade bundles to a test environment.
2. Open the original version of the script or form you want to research in the **Architect**.
3. Right-click the script, and then click **Select All**.
4. Copy and paste the information to a text editor, such as **WordPad**.
5. Save the script with the version number in the name.
6. Repeat steps 2 - 5 for the same plugin updated in this release.
7. Open the original plugin version in **Microsoft Word** (saved in step 5).
8. On the **Tools** menu, click **Compare and Merge Documents**.
9. Browse to and select the updated plugin (saved in step 6) and click **Merge**.
10. View the code changes and determine how to merge the Saleslogix changes with your customizations.

Installing the Bundle Using the Saleslogix Administrator

Use the Saleslogix Administrator to install the Saleslogix v8.1.0 Web Core Update 03 bundle.

Before installing the update bundle, create a bundle of all customized plugins in your database. Saleslogix does not overwrite your customized plugins. However, this bundle can be used as a backup of your customizations.

To install the bundle

1. Open the **Administrator**.
2. On the **Navigation Bar**, click **Bundles**.
3. Click **Install**.
4. Navigate to the folder where you extracted the Update files and double-click the bundle named **Saleslogix v8.1.0 Web Core Update 03**.
5. After the bundle is loaded, the **Choose Actions to Install** dialog box appears. View the plugins to be installed with this release, and then click **OK**.
6. During installation, click **Yes**, **Yes to All** or **OK** on any confirmation message boxes for overwriting system plugins or indexes.
7. In the **Choose Teams** dialog box, select the teams to which you want to release plugins, and then click **OK**.

Installing the VFS Bundle

Install the SLX v8.1.0 VFS Web Core Update 03b.zip bundle using the Saleslogix Application Architect.

To install the bundle

1. Ensure you have **Write** permissions to the bundle installation folder. Check permissions on the Security tab on the folder properties.
2. Open the **Application Architect**.
3. In the **Project Explorer**, right-click the project, and then click **Install Bundle**.
4. Navigate to the folder where you extracted the Update files, click **SLX v8.1.0 VFS Web Core Update 03b.zip**, and then click **Open**.
5. On the **Select Bundle** screen, click **Next**.
6. On the **Select Items** screen, ensure the **Portals** option is selected.
7. Click **Next**, and then click **Finish**.

Building and Deploying the Web Changes

To make your changes available, you must build and deploy the Web portal(s).

To build and deploy

1. In the **Project Explorer**, click the project.
2. Press and hold the **CTRL** key, and then on the **Build** menu, click **Build Web Platform**. All the files in the entire assembly for the current project are compiled. Status for the build is displayed in the Output Window at the bottom of the screen.
3. When the build is complete, on the **View** menu, click **Deployment Explorer**.
4. Expand **Deployments**.
5. Double-click the portal to deploy.
6. Under **Deployment Targets**, right-click the target portal, and click **Deploy Portal**.

- By default, the Saleslogix Web Client portal is set to deploy to the localhost, but you can change these settings to fit your environment.
 - Changes will not be visible to the Offline Web Client and/or Web remote Office until after the next Sync cycle.
7. Repeat steps 1-6 for each of the affected portals.

Modifying the SLXJobServer Configuration file

The SLXJobServer.exe.config_ file contains the following enhancement:

- Increases the Job Server maximum request size to enable running reports with a large number of parameter values.

To enable SLXJobServer.exe.config enhancements

- Do one of the following:
 - If the existing SLXJobServer.exe.config file has not been customized, then rename the **SLXJobServer.exe.config_** file by removing the underscore "_" to replace the existing file.
 - If the existing SLXJobServer.exe.config file has been customized, use a comparison tool to merge the contents of both files into a single file named **SLXJobServer.exe.config**.

Modifying the SLXSDataSyncServer Configuration file

In order to connect to the database you must merge the differences between the installed SLXSDataSyncServer.exe.config file and the .SLXSDataSyncServer.exe.config_ file provided in the update.

To merge

- Use a comparison tool to merge the contents of both files into a single file named **SLXSDataSyncServer.exe.config.exe.config**.

Refreshing the Image Cache

Saleslogix 8.1 SNC Update 03 includes new icons for the Administrator and Architect and Saleslogix Web Core Update 03 includes a new icon for the Application Architect. In order for the new icons to appear on Windows 8 or Windows Server 2012, it may be necessary to refresh the icon cache.

To update the icon cache

1. Log on as the local administrative user to the machine that has the Administrator, Application Architect, or Architect installed.
This must be the Windows administrator user. Users that are just part of the Administrators group may not have the necessary permissions.
2. Open a command window and type **cd C:\Users\[User]\AppData\Local\Microsoft\Windows\Explorer**.
Replace [User] with the Windows user for whom Saleslogix is installed on the machine, for example WebDLL.
3. To view a list of the files and confirm that the folder contains multiple files starting with iconcache, type **dir**.
4. Close all programs running on the machine, including Explorer.
To close Explorer, open Task Manager, open the Details tab, in the list right-click explorer.exe and click End Task.
5. In the command window, type **del iconcache*** and then press **Enter**.
6. Type **shutdown /r** to reboot the machine.
The Start menu may not be visible until you reboot.
7. Repeat for each machine that has the Administrator, Application Architect, or Architect installed.
